

“ The lighting of the Vantaa terminal was updated with Valtavallo’s LED tubes as couraged by good experiences gained from the lighting update of Turku warehouse. Various measurements were executed in the premises by a technical maintenance professional before and after the installation. In addition to the significant 60% energy savings, we noticed that the LED tubes achieve 25% higher illuminance than the T8 fluorescent tubes that were previously used in the premises.

- Pekka Simonen, Director Corporate Real Estate Finland / Baltics, DHL Freight (Finland) Oy
