

Total of 2490 fluorescent tubes were replaced with Valtavalo 28W G4 LED tubes in the Prisma department store in Kajaani, Finland during February-March 2017. This means an energy saving of approx. 60% as well as increase of the amount of light by dozens of percents. The new lighting is also flicker free.

“ In addition to a clear improvement in the energy efficiency, we wanted to modernise the level of illumination in the store, and considerably increase the lux level compared to the old lighting with fluorescent tubes. Due to these facts as well as easy and effortless update of our current luminaires we selected Valtavalo’s most effective LED tubes.”

- Keijo Tuikka, Facility Manager, Osuuskauppa Maakunta, Kajaani Finland
